Project Name	Credit card approval prediction
Maximum Marks	2 Marks

Customer Problem Statement Template:

The Customer Problem Statement helps identify the challenges faced by customers and banks during the credit card approval process. Many customers experience delays, uncertainty, and repeated document verification, while bank officers spend significant time reviewing applications manually. The proposed AI and Machine Learning-based Credit Card Approval Prediction system analyzes applicant information and predicts whether a credit card application is likely to be approved or rejected. This makes the approval process faster, more accurate, and fair for both customers and financial institutions.

Flowchart:

Customer Satisfaction

- ✓ Quick Response
- ✓ Fair Decision
- ✓ Reduced Processing Time

Example:

PROBLEM STATEMENT

Credit Card Applicant

Applies for a Credit Card

Existing Problems

Proposed AI/ML Solution

Expected Outcome

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A customer applying for a credit card	Get my credit card application approved quickly Frustrated and uncertain about the result	The approval process takes a long time and is sometimes inaccurate	The application is checked manually and requires many verification steps	Frustrated and uncertain about the result
PS-2	A bank loan/credit officer	Approve or reject credit card applications accurately	Reviewing every application manually is time-consuming and can lead to errors	There are many applications to process every day	Stressed and less productive
